

What Does It Take To Win on Google?

Personalised Organic Visibility Audit for
[CLIENT WEBSITE]

Your Audit Covers

01 Technical Foundation

02 Content Authority

03 Link Equity

04 Conversion Performance

The Opportunity You're Missing

Your website has the potential to become your best-performing sales channel — but right now, critical gaps in your SEO foundation are actively preventing that. Our audit of [CLIENT WEBSITE] identified issues across all four pillars that are costing you traffic, rankings, and revenue every single day.

[X]%

of target keywords
not ranking on page 1

top competitor

The good news: every one of these gaps is fixable — and we have a roadmap to do it.

The 4-Pillar SEO Growth Framework

How we diagnose and fix what's holding your organic growth back

This framework has driven penalty-free, compounding SEO growth across 500+ campaigns.

SEO Overview — [CLIENT WEBSITE]

Baseline metrics before optimisation begins

[X]

Keywords Ranking
total tracked keywords

[X]

Page 1 Rankings
keywords on first page

[X]K

Monthly Organic Traffic
estimated monthly visits

[X]

Domain Authority
current DA score

Top Performing Pages

Page URL	Traffic	Keywords
[Page 1 URL]	[X]	[X]
[Page 2 URL]	[X]	[X]
[Page 3 URL]	[X]	[X]

Keyword Opportunity

[X] high-value keywords identified where you have ranking potential but no current page 1 position. Addressing content and technical gaps could capture an estimated [X]K additional monthly visits.

01

Technical Foundation

Your technical setup is the foundation everything else sits on.
Issues here actively block rankings — even great content can't rank if Google can't crawl and render your pages correctly.

Areas Assessed

Website Speed

Crawlability & Indexing

Schema / Structured Data

Mobile Optimisation

Redirect & Error Issues

Website Speed Analysis

Slow sites lose rankings, traffic and conversions

⚠ **Needs Optimisation**

[XX]/100

Desktop

[XX]/100

Mobile

*53% of visits are abandoned if
load time exceeds 3 seconds — Google*

Issues Found

Unoptimised images slowing load time

Render-blocking JavaScript / CSS

No browser caching configured

Missing CDN for static assets

Core Web Vitals below Google thresholds

Every 1-second delay reduces conversions by 7%. Google directly penalises slow sites in mobile-first indexing.

Crawlability, Schema & Site Architecture

What Google can and cannot see on your site

Missing Schema Markup

Organisation Schema — Missing

Local Business Schema — Missing

FAQ Schema — Missing

Review / Rating Schema — Missing

Product Schema — Missing

Article Schema — Missing

Sitelinks Schema — Missing

Other Technical Issues

301 Redirect Chains

404 Errors (Page Not Found)

Images Over 100 KB (uncompressed)

Missing Alt Text on Images

Non-indexed Pages Needing Review

Sitemap Not Optimised

These issues prevent Google from fully crawling, understanding, and rewarding your content — regardless of its quality.

02

Content Authority

Great content that Google can't read is wasted content.

We analyse your meta tags, heading structure, readability and content depth — turning your existing pages into ranking assets.

Meta Titles & Descriptions

Heading Structure (H1–H6)

Content Quality & Depth

Readability & Engagement

Keyword Alignment

Meta Tags & Heading Structure

Your digital shop window — and the hierarchy Google reads first

Meta Tag Issues

Missing meta titles on key pages

Missing meta descriptions

Duplicate meta titles & descriptions

Meta titles too short / under-optimised

Optimised meta tags can increase organic CTR by up to 30% — without adding a single new page.

Heading Structure Issues

Missing H1 on multiple pages

Multiple H1 tags on same page

Duplicate H2/H3 content

Empty heading tags

Proper H1–H6 usage is a top 5 ranking factor. Broken hierarchy causes pogo-sticking — hurting dwell time and rankings.

These are fixes that can move the needle within weeks — not months.

Content Quality & Keyword Gaps

What your content is and isn't doing for your rankings

Content Issues Found

Thin content on [X] key pages

Poor readability score (above Grade 8)

Duplicate content across sections

Pages lacking clear topical focus

No internal linking strategy

Content Opportunity

[X] high-intent keywords with no dedicated page

[X] blog topics your competitors rank for — you don't

[X] pages that could rank higher with content expansion

No pillar-cluster content structure currently in place

The average #1 ranking page reads at Grade 8 level. Content clarity is a ranking signal.

03

Link Equity

Backlinks are digital votes of confidence — but only from the right sources.

We assess your link profile quality, identify toxic links, and map the gap between your authority and your competitors'.

Domain Authority Score

Backlink Quality Assessment

Toxic / Spam Link Detection

Anchor Text Distribution

Competitor Link Gap Analysis

Backlink Profile Analysis

Quality over quantity — your current link equity snapshot

[X]

Domain Authority

[X]

Total Backlinks

[X]%

Spam Score

Backlink Issues Found

High volume of spammy / toxic backlinks

Unnatural anchor text distribution

Low referring domain diversity

Competitor has [X]x more quality domains

This Is Our Core Expertise

RankJacker's Lifecycle Link Building Framework has delivered 500+ penalty-free campaigns across all niches. We don't just build links — we build the right links, at the right stage, with the right anchors.

The #1 Google result has 3.8x more backlinks than positions 2–10.

04

Conversion Performance

Traffic that doesn't convert is wasted traffic.

We assess the user journey, CTAs, value proposition and trust signals to ensure organic visitors are being turned into leads and customers.

Call-to-Action Effectiveness

Value Proposition Clarity

Brand Trust Signals

User Journey & UX Flow

Lead Capture Optimisation

Conversion & UX Analysis

Organic traffic is only valuable if it converts — here's what needs fixing

CTAs are not prominent or action-oriented on key landing pages

Value proposition unclear above the fold

No trust signals (reviews, case studies, credentials) on key pages

Poor mobile UX on highest-traffic pages

Contact / lead capture form buried or under-optimised

No content to capture mid-funnel (comparison/consideration stage) visitors

Conversion optimisation typically delivers a 20–40% improvement in lead volume from the same traffic — without increasing your ad spend.

These fixes compound your SEO results — better engagement = better rankings.

The Show Stoppers

These are the critical issues actively preventing your growth right now. Left unaddressed, everything else is less effective.

01

HIGH IMPACT

[CRITICAL ISSUE 1]

Describe the specific finding and why it is blocking rankings or conversions for this client.

02

HIGH IMPACT

[CRITICAL ISSUE 2]

Describe the specific finding and the direct effect it has on organic performance or lead quality.

03

HIGH IMPACT

[CRITICAL ISSUE 3]

Describe the finding, what is causing it, and what rankings or revenue it is costing the business.

What Fixing These Gaps Could Mean For You

Conservative projections based on comparable campaigns we've delivered

Phase 1 — Foundation

Months 1–3

+ [X] %

Organic Visibility
